ABOUT THE COLLEGE

Geethanjali College of Engineering & Technology (GCET) was established in the year 2005 with sole objective of providing quality technical education accessible and affordable to youth of our nation. The college has good infrastructural facilities and modern laboratories. It also has highly competent and dedicated faculty. The college has been recognized as an R&D centre by Scientific and Industrial Research Organization (SIRO). The college offers under graduate program in engineering branches, namely, Computer Science Engineering, Civil Engineering, Electrical and Electronics Engineering, Mechanical Engineering, Electronics and Communication Engineering, Information Technology and postgraduate programs in MBA, M. Tech (Computer Science). All eligible undergraduate programs, namely CSE, ECE, EEE and ME have been accredited with NBA. The college was conferred with "autonomous" status by UGC with effect from Academic Year 2016-17 for a period of six

years. GCET is accredited with "A" grade by NAAC in 2017 with a score of 3.36 on the scale of 4. The college is approved by the apex body of technical education in India AICTE and permanently affiliated to JNTU, Hyderabad and certified by ISO 9001:20008. The college has research projects worth of Rs. 10million funded by DRDO and DST.

ABOUT THE DEPARTMENT

The Department of Civil Engineering was established in the year 2014 and currently the department offers an undergraduate program B. Tech in civil engineering with an intake of 120 students. The department is headed by Prof. Dr. R. Prasanna Kumar with 23 years of experience in teaching. There are 5 Professors, 4 Associate professor and 16 Assistant Professors in the department.

ABOUT THE WORKSHOP

This workshop aims to provide an understanding of the various practical aspects of highway geometric design, checks for compliance with geometric design and the requirements for conducting Road Safety Audit.

CONTENTS OF WORKSHOP

- ❖ Practical aspects of highway geometric design and establishment of the geometric elements on a highway.
- ❖ Quality aspects of Highway Geometric Design to ensure the adequacy of same
- ❖ Road Safety Audit – An Overview
- ❖ Road Safety Audit – A Case Study.

TARGET AUDIENCE

- Faculty of Civil Engineering Department.
- Students of III year -B, Tech (Civil Engineering).

Preface

Kaleshwaram Project has been conceived from the erstwhile Dr. B.R. Ambedkar Pranahita- Chevella Sujala Sravanthi project. Originally, Dr. B.R. Ambedkar Pranahita- Chevella Sujala Sravanthi was proposed to utilize 160 TMC of allocated water of Godavari basin as per Godavari Water Disputes Tribunal (*GWDT*). A barrage was proposed at Tummidihetti (Vil.) to divert 160 TMC of water to irrigate 16.40 lakh acres in 7 districts of Telangana State i.e, Adilabad, Nizamabad, Karimnagar, Medak, Warangal, Nalgonda & Rangareddy, besides drinking water & industrial water.

The transfer of water through lift scheme and conveying it to water-deficient upland regions of Telangana is thus strategic importance and a pressuring need towards a more equitable development of water resources for irrigation and other water requirements. The project is proposed at Medigadda Village, below the point of confluence of Pranahitha and Godavari River about 20 km downstream of Kaleshwaram. The project was named after the famous shiva temple in kaleshwaram as Kalaeshwaram Lift Irrigation Project (*KLIP*).

Waters of the Godavari will be trapped by reverse pumping and stored, there by facilitating agriculture on over 38 lakh acres, including additionally about 18 lakh acres of new ayacut, helping rejuvenate thousands of tanks, providing water for industries, and supplying drinking water including to Hyderabad and Secunderabad by creating a series of storage tanks and a network of pipelines.

SALIENT FEATURE:

GRAVITY CANAL

A total of 1531 km of gravity canals are constructed under the Kaleshwaram lift irrigation project. As the gravity canal requires a large area many conflicts arrived but the government has issued various clearances and permissions simultaneously with the Union Ministry of Environment and Forest and the Central Water Commission. Recently, the Ministry of Environment has permitted utilising 3,168 hectares (7,920 acres) of forestland, including 302 hectares in Maharashtra. The project requires a total of 32,000 hectares.

Pressure pipe

Pressure Mains under the Kaleshwaram lift irrigation scheme is 98 km. The supply of water through a pressurized pipes system will help overcome the issue of water not reaching the tail-end ayacut in assured quantity. Ayacut is the area served by an irrigation project such as a canal, dam or a tank.

TUNNEL

KLIP has World's largest tunnel length of 203 km.

- A twin tunnel of 24.907 km each of 10 m diameter from Sripada Yellampalli reservoir to mid manair reservoir connecting Medaram tank.
- Medaram tank to Pathipaka reservoir 6.6 m diameter tunnel of length 5.5 km.
- Mid Manair to Malkapet reservoir 5.8 m diameter tunnel of length 12.035 km.
- Mid Manair to Anantagiri reservoir 9.5 m diameter tunnel of length 7.651 km.
- Anantagiri to Sri Ranganayaka Sagar 9.5 m diameter of length 8.59 km.
- Sri ranganayaka to Komaravelly Mallan Sagar 9 m diameter of length 16.18 km.
- komaravelly Mallan Sagar to Nizam Sagar two tunnels of 9 m and 7 m diameter of length 18.62 km and 3.596 km.
- Komaravelly Mallan Sagar to Baswapuram reservoir 5.5 m diameter of length 1.275 km.
- Sriram Sagar Project (SRSP) to Masani tank 5.85 m diameter of 17.79 km.
- Masani tank to kondem cheruvu 5 m diameter of length 8.875 km.
- Kondem Cheruvu to Bhumapally reservoir 5 m diameter of length 5.66 km, and etc.

The twin tunnels are designed to carry 2 Thousand Million Cubic feet (**TMC**) every day from the Yellampalli project to the Nandi Medaram project from where the water will be channeled to Mid-Manair project. These tunnels are the last link of the main distributary system to support the Hyderabad Metropolitan Water Supply System (**HMWS**) besides extending irrigation to seven districts in north Telangana.

SURGE POOL

Surge pool constructed on the outskirts of Thippapur village in Illanthakunta Mandal was the Asia largest surge pool with a depth of 92 m and diameter of 56 m with storage of 1 TMC of water, which would be lifted up by using four motors. The input of water is from Mid-Manair Dam & Sri Raja Rajeshwara reservoir by traveling 3.4 km through the gravity canal and 7.6 km through the tunnel.

This open-to-sky Surge pool was constructed in a record time of 13 months at Rs.2700 crore. The four motors in this pool would use 106 MW of power and accordingly a 440 kVA substation was constructed. The pumps would lift daily 1 TMC of water into the Ananthagiri reservoir and from there to the Mallannasagar.

SUB STATION

The State has in all 17, 400 kV substations to meet its power transmission needs. In addition to this, 220 kV substations were being set up at eight places along with the pumphouses at Medigadda, Annaram, and Sundilla. As per TSSPDCL 17 substations would be supporting a load of 4,800 MW, but the consumption would be in around of 3,840 MW.

As of now, five substations of 400 MW capacities are coming up under the project. In addition, eight 220 kV substations, two 132 kV substations and one 33 kV substations are coming up as a part of the project. Substations of 400 kV capacities are being set up at Sundilla Pump House (Link I), Medaram (Package 6), Tippapur (Package 10), Chandalapur (Package 11) and Tukkapur (Package 12).

The KLIP power infrastructure includes six 400 kV and 220 kV substations, 7 km of 400 kV XLPE under Ground Cable and 260 km transmission lines established within two years of time. This is another record in the country for the completion of power substations and transmission in the shortest period.

NO AND SIZE OF GATES	20 NOS. RADIAL GATES 50' X 24'
NO. OF VILLAGES AFFECTED - FULLY	12 NOS. PARTIALY 4 NOS.

The Lower Manair Dam (**LMD**) is constructed across the confluence of Mohedamada and Manair river which is the tributary of River Godavari. The lower Manair is named as Prof.G.V.Sudhakar Rao after his service to the local people. LMD is located in Alugunur village, Thimmapur Mandal, Karimnagar District, Telangana. The total irrigating land under this dam is 400,000 acres.

The LMD is located on the Manair River at (latitude 18°24' N and longitude 79° 20' E) Karimnagar District. The LMD construction was started in 1974 and ended in 1985. It is a combination of both Earth and Masonry dam. It serves as a balancing reservoir for the Kakatiya canal. The total catchment area of the river is 6475 sq.km (2500 sq. miles). The storage capacity of the reservoir is 680.46 million cubic meters (24 TMC). The spillway of reservoir is designed for a discharge of 14,158 cumec (500,000 cusec) but observed is 9,910 cumec (350,000 cusec) with length of 363 m (1,190 ft.). Whereas the length of non-spillway is 278 m (910 ft.) and length of earth dam is 10.10 km (33,156 ft.). The maximum height of the masonry dam is 40.583 m (133 ft.) and the maximum height of the earth dam is 26.822 m (88 ft.). The top-level of the dam is 284.378 m (933ft.) with a maximum water level of 281.016 m (922 ft.), full reservoir level of 280.416 m (920 ft.), where the crest level of the dam is 268.88 m (896 ft.). The dam comprises of 20 radial gates with 50 ft. × 24 ft. in size from the crest level. The total number of villages which are fully and partially submerged under this dam is 13 and 3 respectively

KANNEPALLI PUMP HOUSE

Kannepalli is the first pumping station in a chain of a total of 20 pumping stations of the Kaleshwaram Lift irrigation project. It is constructed at the intersection of the Godavari and Pranahitha. It is located (latitude of $18^{\circ}78'N$, the longitude of $79^{\circ}92'E$) at Medigadda in Kannepalli village of Mahadevpur Mandal in Jayashankar Bhupalapalli district. There are 17 pumps in this pump house, each of capacity 40 MW. Pump house is constructed over a length of 328 m and 60 m wide, with 17 pumps which are being arranged in house, in which of these 11 pumps have provided Barex, these 11 pumps each with a capacity of 40 MWs and highly efficient motors. These 11 pumps are designed to lift 180 TMC at a rate of 1.8 cubic feet per day and discharging water 660 cusec capacities. Biggest pump house in the world is constructed at this place and the large-scale machinery imported from Japan, Switzerland, and Austria countries. As part of the Kaleshwaram Project, Megha Engineering & Infrastructures Limited (*MEIL*) completed a total work of 77.07 lakhs Cu-m, including 10.56 lakhs Cu-m works of Pressure Main and 10.50 lakhs Cu-m for the Delivery cistern.

ANNARAM BARRAGE

Annaram barrage, combined with the Medigadda and Sundilla barrages constitute the ambitious KLIP. Almost 2 TMC of water per day will be moved upriver through gravity canals from Medigadda barrage to Annaram barrage, from there it will be pumped further back to Sundilla barrage. From there, the water will be diverted to the Yellampalli reservoir and then distributed to nearby districts. Annaram is the second-largest barrage in the entire KLIP, with a capacity of 10.87 tmc. Annaram Barrage was built at a cost of 27.32 billion in a timeframe of 24 months. Execution at the project is done by Secant piling, which was used

RANGANAYAKA SAGAR BALANCING RESERVOIR

Sri Ranganayaka Sagar Reservoir or Imamabad Reservoir comes under package 11 of KLIP, located near Chandulapur village of Chinnakodur Mandal of Siddipet district, this balancing storage reservoir has a capacity of 3 TMC acquiring 2176 acres of land. The specialty of this reservoir is no village is submerged under this project. This project was undertaken by MEIL. MEIL has established 4 machines with a total capacity of 541 MW which can discharge 343.3 cumecs of water. It receives water from Kaleshwaram via the Mid Manair project. From here, water would flow into the Komuravelli Mallana and then on into Konda Pochamma reservoirs. The project was estimated to cost around Rs 463 crores, providing irrigation to around 1.1 lakh acres. This reservoir's bund will span a length of 8.65 km and will stand 32.63 m tall at its highest point. While the bund will be six meters wide, at the ground level, it will be 196 m wide.

in a cut-off foundation for the first time in the world for barrage construction.

Construction details:

Construction of barrage for a length of 1,270 m with 66 vents of 15 m along with energy dissipation arrangement and abutments, wing and return/flank wall with a design flood discharge 65,000 cusec. The barrage is constructed with radial gates of size 15 m \times 13 m (12 in total) for under sluice bay and for other bays of size 15 m \times 12 m (54 in total), and a road bridge with clear carriageway of 7.5 m consisting 72 piers. Length of launching apron at the upstream side is 71 m and at the downstream is 116.4 m.

Highlights of construction:

- 1,200,000 cu m of concreting done for the entire project.
- 55,000 mt of reinforcement steel used.
- 80 lakh cu m of earthwork moved.
- 1,500 tonnes of cement consumed on average per day.
- 200 mt of steel used on average per day.
- About 6,000 cu m concrete poured on average per day.
