The chairman,
GCET
cheerjal,

Sub:- Request for donating water cooler to the
college.

Respected Sir,

We the Alumni of GCET, Mr. Lokesh Kumar
and Mr. Sai Ram bearing Roll no:- 15R11A05G and
15R11A05F5 respectively are in debted to
college & want to help our Juniors in some
way we would want to donate water
coolers to our college so that our faculty
& Juniors could make a good use of
them kindly allow us to donate.

Thanking you,

Good!

Sincerely

Sai Ram

Mr. Lokesh Kumar and Mr. P Sai Ram, 15R11A05C9, 15R11A05F5 respectively; 2019 Pass outs donating 2 **Water Coolers** for staff and juniors keeping in mind the hot summers being faced by their staff and juniors, they want to donate the coolers as a gratitude towards the college. The donation process took place in presence of Dr.S. Udaya Kumar, Principal GCET; Mr. K .Somasekhar, Dean Student Affairs; Dr. Radhika Dora, HoD EEE; Mrs. Preeti Prasada, Alumni Coordinator on 6/8/2019

Date: 07/06/2018
Place: Hyd.

Respected,

EEE HOD, Faculty members,
Passout Seniors, Alumni Students and so on.

This is Aravind Eppala, Student
of GCET, Studying Electrical and Electronics Engineering
bearing a rollno 18R11A0216.

I have suffered with rare disease
in brain (blood bleeding in brain). I have admitted in
hospital and fought for my life for many days.

I Really thank you all for
helping me financially. I have received ₹ 45,970/-
from our college as a donation. Once again really
thank you for donating that huge amount.

Thanking you all,

E. Aravind.

Report on Centre of Excellence (CoE) in VLSI Design Department of ECE

Geethanjali College of Engineering and Technology

Very Large Scale Integration (VLSI) is the process of creating an Integrated Circuit (IC) by combining several thousands of transistors into a single chip. Now-a-days a Smartphone can do the job of a whole collection of gadgets. It's a phone, camera, camcorder, Walkman, watch, wallet (carrying digital cash), radio, GPS, TV, VCR, and computer all in one. Still, we may wonder how all these functions can fit into such a small mobile.

There are several job opportunities in the semiconductor industry in India and abroad in various categories of VLSI Design. Hence, Centre of Excellence in VLSI Design was established in Geethanjali College of Engineering and Technology on 9th May, 2019 to support all interested students to get into a career in VLSI Design.

Under the aegis of CoE in VLSI Design, several activities were conducted to groom the students to gain expertise in this domain. The details are given in this report.

1) Interaction Session with Ms.Ch.Mounica, ASIC Verification Engineer, Synopsys India Pvt. Ltd. On 05/10/2019.

Ms.Ch.Mounica is an alumni of Geethanjali, She shared her valuable experience as a student from our department. Based on her experience in challenging career opportunity currently in VLSI Design, she has given all tips and tricks to students so as to acquire required knowledge to get into VLSI Domain.

Report on guest lecture on "Career guidance and introduction to Analytics"

Speaker Name: Mr E. Anirudh, Technology Analyst, Infosys Limited, Mysore Campus, Mysore. He is the alumnus of GCET.

A brief report on the topics discussed:

The world today is incomplete without data. Humongous amounts of data are generated by users every day. If this data can be somehow analyzed and interpreted to capture what the user wants and make innovations accordingly, we could bring in a revolutionary system where businesses can provide state-of-the-art solutions to the problems faced by a common man and that too at low costs. Better still, this system can improvise and improve itself to be more innovative by the day. This revolution is data science and involves data analytics, machine learning and much more. He explained about big data, data science and then how they are different from each other.

Just like the name, big data means a lot of data – unstructured or raw. With increasing demands and interactive business models, the traditional way of the collection of data is not sufficient anymore. The humongous amount of data generated every day from various sources is called big data. Next, we need to have systems that can collate the data, filter it for the relevant target group, apply some statistical and machine learning models and predict future decisions based on the current data. Think of it as a feedback system. Data Analytics does a part of that – performing statistical analysis on sets of data to find answers to business problems. The rest of it – parsing the data, machine learning, predictive analysis, and visualization – in data science.

You must have seen this kind of intelligence in your Facebook feed. If you see a particular genre of videos or texts, you are shown with similar kinds of ads in the future too. On average, even if you spend about 10 minutes on Facebook, you can see a few videos of your interest and 'like' somebody's posts. Well, all this data (big data) is collected by Facebook to keep track of your interests and disinterests.

A machine can use this data. Based on your selections, Facebook gives you next similar suggestions. For example, if you like Bournvita, you might get an ad about Cadbury drinking chocolate or some other similar drinks. On the other hand, if you choose not to see the bournvita ad on the first go, you will not be shown any other similar ads in the near future too.

Imagine how complex the system must be that caters to customization at such a minute level for each user. This is the same way online shopping works too.

All of this is done through data analytics and data science.

Data Analytics:

Through the above example, we see that there is a lot of raw data that is collected and can be analyzed in a proper way to get business benefits. Such an analysis of data to fetch information and get meaningful insights to solve a business problem is called data analytics.

Data analytics uses several tools and techniques to analyze the humongous big data as opposed to pure human intervention and manual organization of data. Data analytics involves the following simple steps –

- Determining the data requirements and grouping. This could be based on the target group or the business problem. Data can be grouped in any manner which is most appropriate, for example, age, location, gender, interests, lifestyle, etc...
- Collecting data from various sources online and offline – computers, physical surveys, social media, etc...
- Organizing the data for analysis. The most common method to organize data is in spreadsheet although frameworks like Apache Hadoop and Spark are picking up the pace to replace spreadsheets.
- Incomplete, inconsistent and duplicate data sets are removed and data is cleaned before analysis. In this step, any errors in the data are corrected and data becomes ready to be analyzed.

In data analytics, the data analyst already has information in hand – for example, a business problem, and works on a known set of data to provide descriptive, predictive, diagnostic or prescriptive analysis..

Data analytics is becoming increasingly important in all the major domains like healthcare, finance, retail, tourism, and hospitality industries.

Data science:

Data science has a wider scope compared to data analytics. We can say that data analytics is contained in data science and is one of the phases of the data science lifecycle. What happens before and after analyzing the data is all part of data science.

In addition to the knowledge of programming languages like Python, SQL, etc like a data analyst, data science combines statistical knowledge and domain knowledge to produce insights from data that can drastically improve business. Data science experts use machine learning algorithms to any type of data – text, image, video, audio, etc... to produce AI systems capable of thinking like a human.

Data science has the following main components –

- **Statistics** – Statistics deals with the collection, analysis, interpretation, and presentation of data through mathematical methods.
- **Data visualization** – Results of data science are displayed in the form of visually appealing diagrams, charts, and graphs which makes it simple to view and understand. This also helps in quicker decision making by highlighting the key takeaways.
- **Machine learning** – this is an essential component where we use intelligent algorithms that learn on their own and predict human behavior as accurately as possible.

Scanned with CamScanner

PRINCIPAL
Geethanjali College of Engg. and Tech.
Cheeryal (V), Keesara (M), Medchal Dist. (T.S.)-501 301.

A data science expert identifies and defines potential business problems from various unrelated sources and gets data from these sources. Once data is analyzed through data analytics, a model is formed and tested for accuracy iteratively.

THE DATA SCIENCE HIERARCHY OF NEEDS

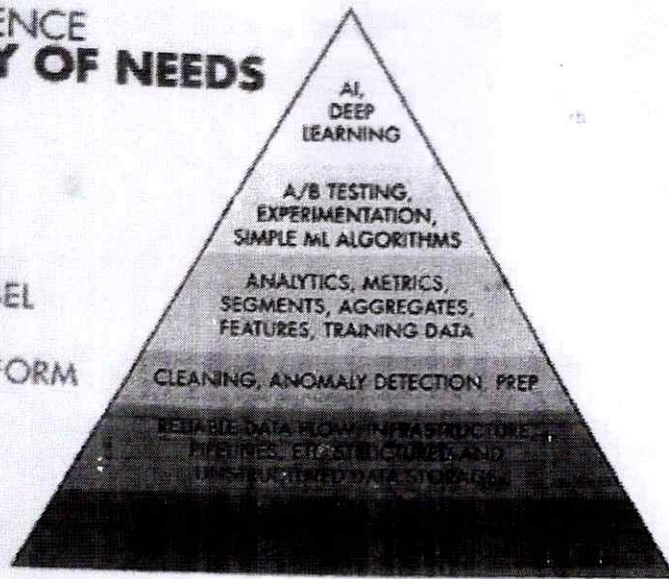

LEARN/OPTIMIZE

AGGREGATE/LABEL

EXPLORE/TRANSFORM

MOVE/STORE

COLLECT

As you may have realized by now, Data science is vast and offers a more promising future. However, if you want to be closer to programming, Data analytics could be your best start. One thing is clear – both the fields are hungry for data and you need to work extensively with data to understand the whole picture. Data science includes the entire business process from involving stakeholders, storytelling, data analysis, preparation, model building, testing, and deployment. Data Analytics is one of the stages of data science – and a big one – where the big data is analyzed and insights are extracted and prepared in the form of graphs, charts, and diagrams. It is easier to move up the ladder from data analytics to data science.
