**Structure-function relationships of inhibition of human cytochromes P450
3A4, CYP2C9 by 97 flavones derivatives**

Sunil Junapudi

Department of Pharmaceutical Chemistry, Geethanjali College of Pharmacy, Cherryal,
Keesara, Ranga Reddy District, Telangana, India- 501301

Abstract

In this study, we examined and compared the structure-function relationships of the inhibition of human P450s 3A4, CYP2C9, CYP2C9 in complex with an inhibitor with a total of 97 flavonoids by measuring HEM for the former three enzymes and Protoporphyrin IX containing FE, HEME-C respectively, for the latter two enzymes. The flavonoids used were flavone, nine hydroxylated flavones, four methoxylated flavones, eight methoxylated hydroxyflavones, flavanone, 4',5,7-trihydroxyflavanone and its glycoside, 4',5,7-trihydroxyisoflavone, and 4'-methoxy-5,7-dihydroxyflavone. During this work we tend to study the interaction of ninety seven flavones derivatives against P450s 3A4, CYP2C9, CYP2C9 for hepatoprotective activity discovery using molecular docking simulation. Docking simulation for every compound was continual molegro virtual docker MVD 2013.6.0 for windows was used to predict the degree of each P450s 3A4, CYP2C9, CYP2C9 binding pockets. In this study was conclusion that structurally diverse flavonoid derivatives inhibit human P450 CYP2C9, 3A4 and CYP2C9 in complex to different degrees, depending on the enzymes and inhibitors, and that there are different mechanisms of inhibition of these P450s by flavonoids. The presents of bi-phenolic (bi-flavones: unix-26, 29, 61) groups was found to surpriselly increase inhibition potency toward these P450 enzymes. Some of a 5, 7-dihydroxyl group in the A ring of flavone was found to increase the inhibition potency toward these P450 enzymes (unix-4, 80). Molecular docking studies suggest that there are different orientations in the intermation of the six flavonoids with the five P450 enzymes examined and that two or more mechanisms are possible to explain how various flavonoids inhibit individual P450 enzymes differently.

Key words: Molegro Virtual Docker, flavones, human cytochromes P450.
